Scope of Engagement

metrix

Project background and objectives

The key objective of the Social Research Project for a New National Fire Danger Ratings System (NFDRS) and Warnings System is to provide sound evidence for the development of consistent national risk and warning systems to **communicate bushfire risk and subsequently increase community safety and promote desired protective behaviours.**
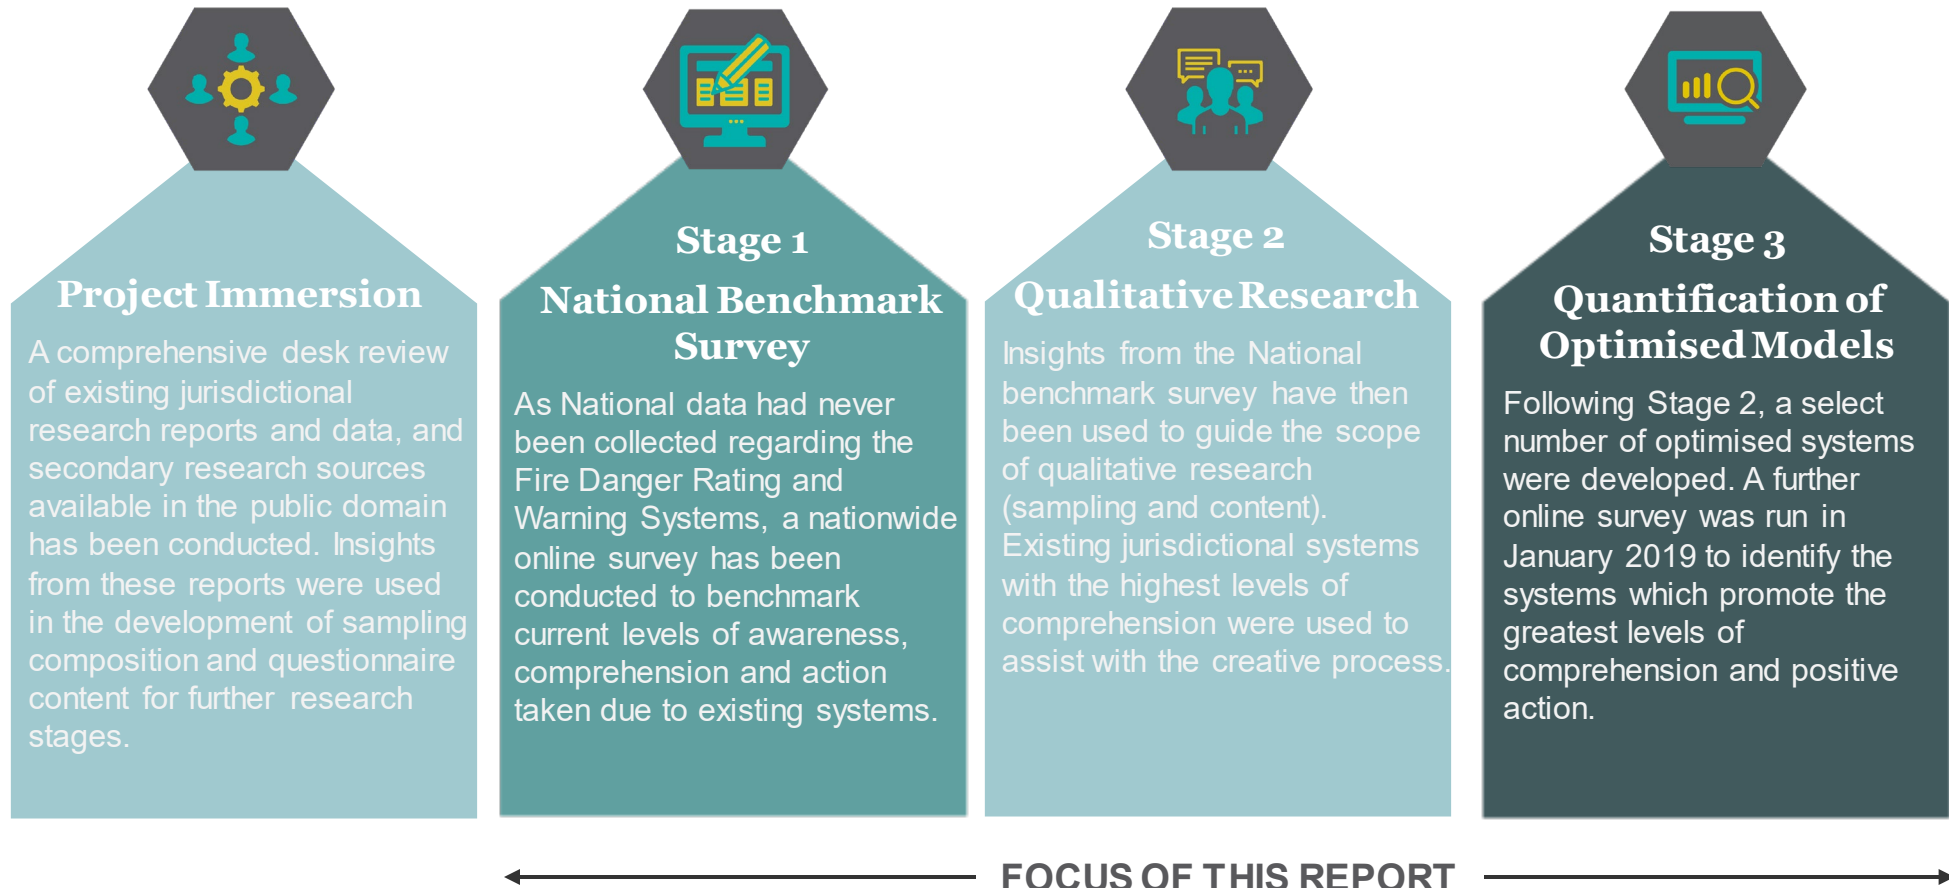

This involves seeking the knowledge, views and understanding of the public themselves, rather than emergency services personnel. Specifically, the aims of this project are to identify the features of communication tools for:

- the New Fire Danger Rating System, and

- the warning systems for fire, cyclone, flood, extreme weather and extreme heat that would best facilitate community understanding of fire and hazard risk and appropriate protective action.

Full research reports have been developed for each research stage* with analysis and findings presented at a national level. This report focuses on research findings specific to the Australian Capital Territory, with comparisons to national averages where relevant.

What levels of comprehension, use, uptake and effectiveness exist for the current NFDRS and Warning Systems?

What form and characteristics are required for a new NFDRS to improve community safety outcomes?

What form and characteristics are required for an all hazard Warning Systems to improve community safety outcomes?

See page seven for a summary of research stages

metrix

A four stage methodology was developed, with this report summarising findings from Stages 1 to 3

Project Immersion

A comprehensive desk review of existing jurisdictional research reports and data, and secondary research sources available in the public domain has been conducted. Insights from these reports were used in the development of sampling composition and questionnaire content for further research stages.

Stage 1
National Benchmark Survey

As National data had never been collected regarding the Fire Danger Rating and Warning Systems, a nationwide online survey has been conducted to benchmark current levels of awareness, comprehension and action taken due to existing systems.

Stage 2
Qualitative Research

Insights from the National benchmark survey have then been used to guide the scope of qualitative research (sampling and content). Existing jurisdictional systems with the highest levels of comprehension were used to assist with the creative process.

Stage 3
Quantification of Optimised Models

Following Stage 2, a select number of optimised systems were developed. A further online survey was run in January 2019 to identify the systems which promote the greatest levels of comprehension and positive action.

FOCUS OF THIS REPORT

Note: The project Steering Group (see appendix) provided input to ensure the collaborative development of questionnaires and discussion guides used in research Stages 1 through 3.

metrix

Sample summary

Stage 1 — National Benchmark Survey

Fieldwork conducted from 14 to 27 September 2018.

A sample of **n=101 was achieved in Australia Capital Territory** providing a maximum margin of error of ±9.75 at 95% confidence.

	n=	Weighted %
Metro	101	100%
18 – 34 years	31	35%
35 – 49 years	30	28%
50 – 64 years	22	20%
65+ years	18	17%
Male	49	49%
Female	52	51%
Total	**101**	**100%**

Data has been weighted by age and gender to ensure representativeness of the national and state populations.

Stage 2 — Qualitative Research

Fieldwork conducted from 13 to 15 November 2018.

To maximise engagement and participation, a cash incentive between $80 and $100 was provided to participants of focus groups.

Location	Date	Attendance
Gungahlin	14-Nov 2018	8
Kambah	13-Nov 2018	7
Central Canberra	15-Nov 2018	8

Stage 3 — Quantification of Optimised Models

Fieldwork conducted from 24 May to 9 June 2019.

A sample of **n=100 was achieved in Australian Capital Territory** providing a maximum margin of error of ±9.80% at 95% confidence.

	n=	Weighted %
Metro	100	100%
18 – 34 years	35	35%
35 – 49 years	26	26%
50 – 64 years	27	27%
65+ years	12	12%
Male	48	49%
Female	52	51%
Total	**100**	**100%**

Data has been weighted by age and gender to ensure representativeness of the national and state populations.

Where variances from national figures exist, findings have been called out in slide commentary.

Key Figures Snapshot

Key figures snapshot | Fire Danger Ratings

Fire Danger Ratings | Stage 1

Though awareness of the Fire Danger Rating System is higher than the national average, there is still room to improve comprehension of desired actions at each Fire Danger Rating. Three in ten don't feel the current system is relevant, and just a third are using the system.

	National	Australian Capital Territory	
Unprompted awareness	72%	**76%**	See page 12
Prompted awareness	93%	**97%**	
Understanding of FDRS purpose:			
Predicts how likely a fire is to occur	52%	**53%**	See page 12
Predicts how dangerous a fire could be if it did occur	39%	**41%**	
Don't know	9%	**6%**	
Low-Moderate to High	56%	**66%↑**	See page 14
Very High to Severe	24%	**24%**	
Extreme	33%	**23%↓**	
Catastrophic/Code Red	72%	**64%**	
Feel the Fire Danger Rating System is relevant	61%	**71%↑**	See page 15
Currently use the Fire Danger Rating System	37%	**32%**	

↑↓ Significant difference to National figures at 95% confidence

Optimised Fire Danger Rating | Stage 3

Familiarity with the current Fire Danger Rating System is driving an optimised and simplified version of the existing system.

Shape	National	Australian Capital Territory	
Semi – Circle	63%	64%	See page 25
Triangle	26%	29%	
Rectangle	10%	7%	
Colour Set			
Green, yellow, orange, red	56%	57%	See page 25

Extreme Heat			
Prompted awareness	55%	58%	See page 18
Have taken action in past due to warning^	56%	49%	

↑↓ Significant difference to National figures at 95% confidence

Optimised Multi Hazard Warning System | Stage 3

The proposed visual design for a Multi- Hazard Warning System is clearer than the accompanying warning names.

Shape		National	Australian Capital Territory	
Triangle	△	58%	50%	See page 34
Diamond	◇	42%	50%	
Colour Set				
Yellow, orange, red	🟨🟧🟥	35%	36%	See page 35
Yellow red, black	🟨🟥⬛	36%	38%	
Blue, yellow, red	🟦🟨🟥	29%	26%	
Icon Type				
Hazard specific icon that visually increases in severity as warning type increases		69%	57%↓	See page 34
Action icons (e.g. information 'i')		19%	36%↑	
Consistent hazard specific icons		12%	7%	

There is no clear preference for most effective names for level 1 and 2 warnings. See page 36 for further details.

Level to indicate danger has lessened

	National	Australian Capital Territory	
Reduced threat	47%	53%	See page 37
Reduced risk	33%	29%	
All clear	20%	18%	

Awareness and Understanding of Current Systems

Topline insights from Stages 1 and 2

metrix

Natural hazards are at the forefront of mind for many, particularly bushfires

Since the 2003 bushfires Kambah residents are vigilant about the risk of fire, however this heightened awareness and action planning does not extend to other areas of Canberra unless an individual has been directly affected. Other natural hazards are not perceived as adversely impacting peoples' lives; however this is within the context of their individual experiences.

Gungahlin	Fire was perceived to pose the greatest risk, both personally and to the broader community. Severe storms specifically related to heavy hail and rain was also viewed as a risk, however the level of concern was lower. Lower levels of concern were driven by a perception that the potential for impact was lower (e.g. roof damage).
Kambah	Bushfires and severe storms (particularly wind and hail) were natural hazards mentioned top of mind in Kambah. Bushfires are of greater perceived risk, though wind and storm damage happen more frequently. Prior to 2003, most residents didn't consider fire a high risk. There was some mention of flooding, however this was limited.
Central Canberra	Residents were not concerned about natural hazards and did not see them as a threat to themselves. A very transient population meant many had experience with natural hazards outside of Canberra. Residents were aware of the potential hazards in the outer suburbs, but didn't pay much attention to these unless planning to travel. Some mentioned storms and floods as potential hazards of concern, but felt these were unlikely to directly impact Canberra, particularly Central Canberra.

metrix

Stage 1
National Benchmark Survey

Although awareness of the FDRS is strong, understanding of its purpose remains limited

Levels of awareness and understanding aligned with the national averages.

Q13c. Have you seen or heard of these fire danger rating before today?
Q13b. Which of the following statements best describes what the Fire Danger Rating is?
↑↓ Significant difference to National figures at 95% confidence

metrix

While there was general awareness of the system, understanding of its purpose was limited

There was broad awareness of the FDRS, but attention paid to it and knowledge about it varied greatly. Those who had experience with the 2003 bushfires, had higher recall and understanding of the system.

Gungahlin	There was general awareness of the system, predominately in relation to the road signage. Beyond this, knowledge of the system's purpose and the desired behaviours of each level was limited. Those living on a property (acreage or larger), or involved in an industry directly impacted by the FDRS, had slightly higher levels of understanding.
Kambah	There was general awareness of the signs, however some residents were surprised to find out they drove past it every day and hadn't noticed it. Others were vigilant of it, particularly based on weather conditions that would cause a high rating to be a concern. Limited action is taken except on extreme days as a result of experience from the 2003 fires. BOM and other 'news' sites are used alongside the FDRS – it is not typically used in isolation as many are still unaware of the specific actions at each level.
Central Canberra	There was broad awareness of the system, but limited use. Residents did not see fire as a personal threat to themselves in the city. Some use was noted if going bushwalking or picnicking, however other information sources were more regularly used such as BOM, radio, and the news.

Stage 1
National Benchmark Survey

There is confusion surrounding the required behaviours for each FDR

A limited ability to correctly identify the required actions suggests limited understanding of how the community should respond to the FDRS.
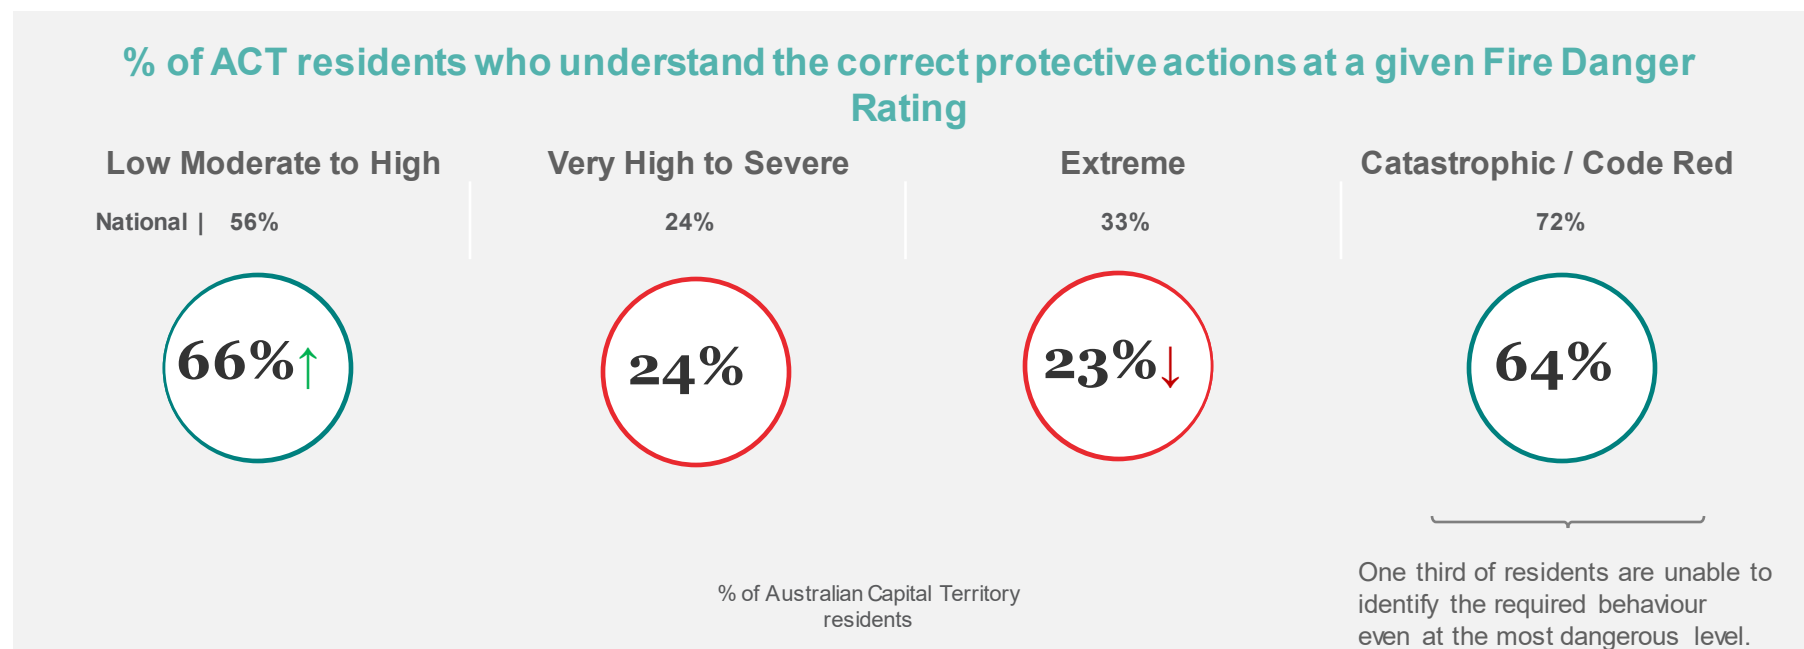

% of ACT residents who understand the correct protective actions at a given Fire Danger Rating

Low Moderate to High	Very High to Severe	Extreme	Catastrophic / Code Red
National | 56%	24%	33%	72%
66%↑	**24%**	**23%**↓	**64%**

% of Australian Capital Territory residents

One third of residents are unable to identify the required behaviour even at the most dangerous level.

14

metrix

The FDRS is recognised as relevant by the majority, but few are using the system

The perceived relevance of the FDRS is highest among Australian Capital Territory residents. While visibility and relevance is high, lower ratings of engagement and use suggests the current FDRS is not compelling enough to motivate action.

ACT | Fire Danger Rating System Sentiment

% Agree and strongly agree

Perceptions of existing warnings systems

There was little knowledge of the official warning system unprompted, most used News, BOM and other media to know what was happening.

	Bushfire	Flood	Severe Storms	Extreme Heat
Perceptions of Canberra system	Most were unfamiliar with the words and phrases of the bushfire system, and there was very little awareness of the visuals, except where they were used on maps and other sites. Most people recalled visuals used by BOM, or weather symbols and weather warnings. Some like the simplicity of the bushfire system and colours, and that some of the icons are recognisable (e.g. advice). Others felt it is too simple and not informative enough – icons do not convey the information and levels are confusing, so education is required. For many, the system did not work once the warning event had gone past a general advice or warning level. People wanted and would use more detailed information based on their specific location.			
Perceptions of systems from other jurisdictions	Given the low levels of knowledge, there was openness to other systems. Visuals are considered a great way to demonstrate the hazard, but clearer levels are required to tell people what they should do and when. A formal system was perceived as requiring community education. The Victorian system was polarising, with some seeing the benefits of a unified system, but others preferring hazard specific visuals (e.g. extreme heat not being a multi tiered system, flood and fire requiring evacuation and take shelter warnings). Whatever the system, it was recognised that no one system would perfectly cater to all hazards.

Exploring Fire Danger Rating and Warning Systems

Topline insights from Stage 2 creative sessions

metrix

Exploring ratings and warnings in the ACT

Fire Danger Rating System

- Majority created three to four levels (objectively four levels is more appropriate to encourage action at half-way point).

- A traffic light colour system was used but there was debate on the final level name – code red, catastrophic or extreme were all mentioned.

- Preference on shape was mixed between the current semi-circle, a vertical bar or triangle.

- There was a discussion of the importance of utilising technology such as LED displays to attract attention and increase the trustworthiness of the sign.

- Levels must be able to stand on their own with visuals and sound for use in other channels.

- Needs to document three or four required actions for each level so people know what to do and when they should take action (and why they should care about paying attention to the system).
Warnings Systems

Bushfire Warnings

- Two to three levels with potential inclusion of 'all clear' and 'evacuation' levels preferred. A realistic 'flame' symbol was thought to communicate the hazard effectively. There was an expectation of messages to support the visual warning system.

Flood Warnings

- Participants found warning and emergency warning confusing as the difference is unclear. Clarity and escalation are thought to be necessary aspects of any visual representation. There was debate about the most appropriate colours (red for danger or blue/grey to reference the hazard).

Extreme Weather Warnings

- Like floods, warning and emergency warning are confusing as the difference is unclear. There was debate about the most appropriate colours (reds for danger or blue/grey to reference the hazard). There was an expectation of action orientated messages to support the visual warning system.

Extreme Heat warnings

- A one level only 'warning' that switches on and off was found to be most appropriate. Suggested icons included a thermometer or sun. Similar to other hazards, action orientated messaging supporting the warnings was expected.

An Optimised Fire Danger Rating System

Quantification through Stage 3 online survey

metrix

Stage 3
Quantification of Optimised Models

Development of the optimisation survey was an inclusive process between Metrix and the Project Steering Group

Workshops were held to finalise the optimisation survey bringing together findings from Stage 1 and 2 research and knowledge from subject matter experts.

Due to the need to include an out of scale level and respect the outcomes of the 2009 Victorian Bushfires Royal Commission, it was agreed that **four levels** would be used to communicate the Fire Danger Ratings.

Similarly, due to potential conflicts regarding the name of the top level, the words Code Black, Red Flag, Maximum, Major and Disastrous were included for testing. Please note these were not developed from Stage 2 insights.

metrix
The optimisation survey included four main development stages

Prior to developing their Fire Danger Rating System, participants were provided with a description of the system's purpose along with how the system and its ratings are currently communicated. The purpose of the description was to set the scene on what the system's objectives are to assist participants in developing a system. They were then asked to develop the following four stages.

Shape	**Colour**	**Word Set**	**Supportive Message**
To set the base of their design, participants first chose their preference between a semi-circle, triangle and rectangle as the shape for the system.	Participants then chose the colour set that best communicated the increasing fire risk and that would encourage preparatory action to stay safe. Three colour sets were developed using findings from Stage 2.	Two word banks were developed based on findings from Stage 2 to communicate the first three levels of the system. Participants were then required to rank their top 3 preferences for the fourth level.	Finally participants were asked to select the supportive message for each level of the system that would be most effective to encourage them to take action.

To limit order bias, the order of choosing the colour and word sets was rotated for each respondent.

Please note that the questionnaire has been included in the appendix (page 53).

metrix

The majority feel the existing semi-circle design is most effective to visually represent the FDRS

Shape preference differs slightly from Stage 2 as an online survey environment prompts participants to select the most intuitive and effective option within a set time limit. Simplifying the existing colour set to include green, yellow, orange and red is most effective to indicate increasing risk.

Shape to Communicate the Fire Danger Rating

■ ACT   ■ National

	ACT	National
4 stage semi-circle	64	63
4 stage triangle	29	26
4 stage rectangle	7	10

Colour Set to Communicate Increasing Risk

■ ACT   ■ National

	ACT	National
Green, Yellow, Orange, Red	57	56
Green, Orange, Red, Black	24	24
Yellow, Orange, Red, Black	19	20
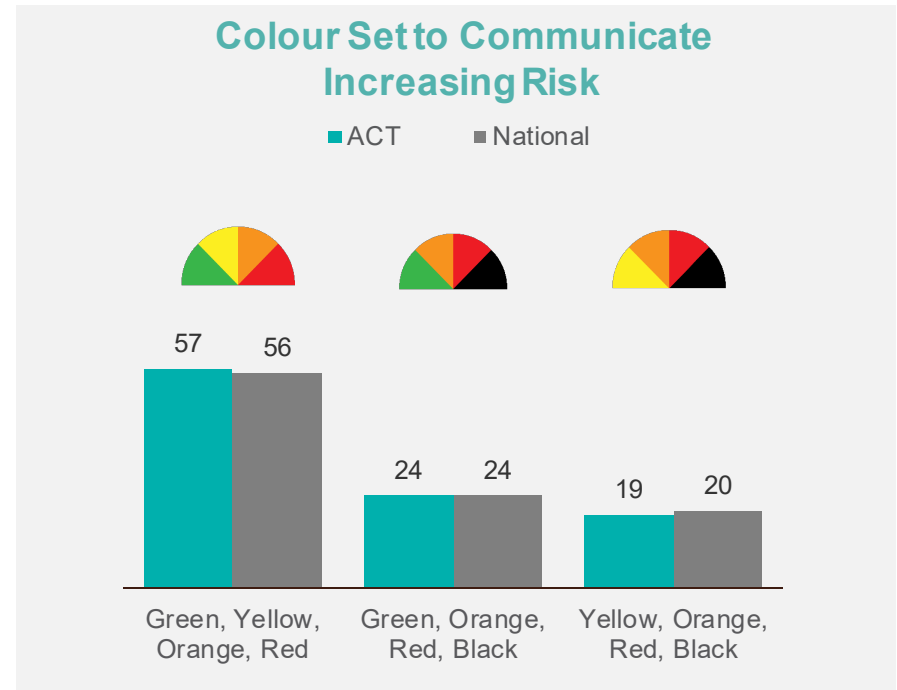

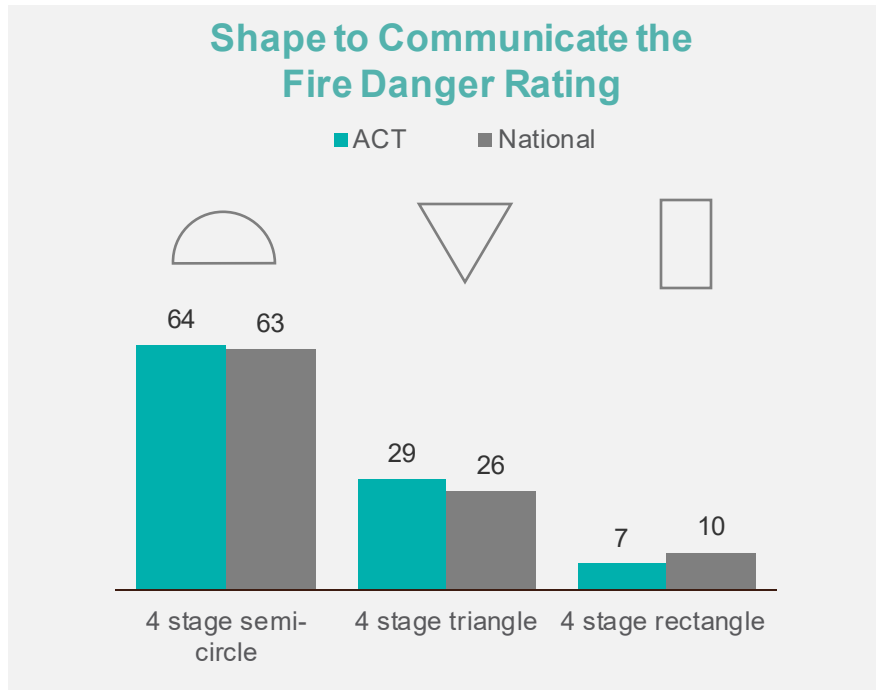

% of Australian Capital Territory residents

ACT n=100 | National n=5,408
Q2. Which shape would be most effective to communicate the Fire Danger Ratings?
Q3. Now, which of these colour sets best communicates increasing fire risk and would encourage you to take action and stay safe at each Fire Danger Rating?
Note: Colour set figures are for general population. Semi-circle colour images are for display purposes only.

↑↓Significant difference to National figures at 95% confidence

metrix

The preferred names for FDR levels is a simplified version of the existing system

Extreme was the preferred name for the top level of the FDR (top 3 preference), aligning with the national average.

Preferred Name of Fire Danger Rating Levels

Preferred Name for Top Fire Danger Rating Level

% of Australian Capital Territory residents
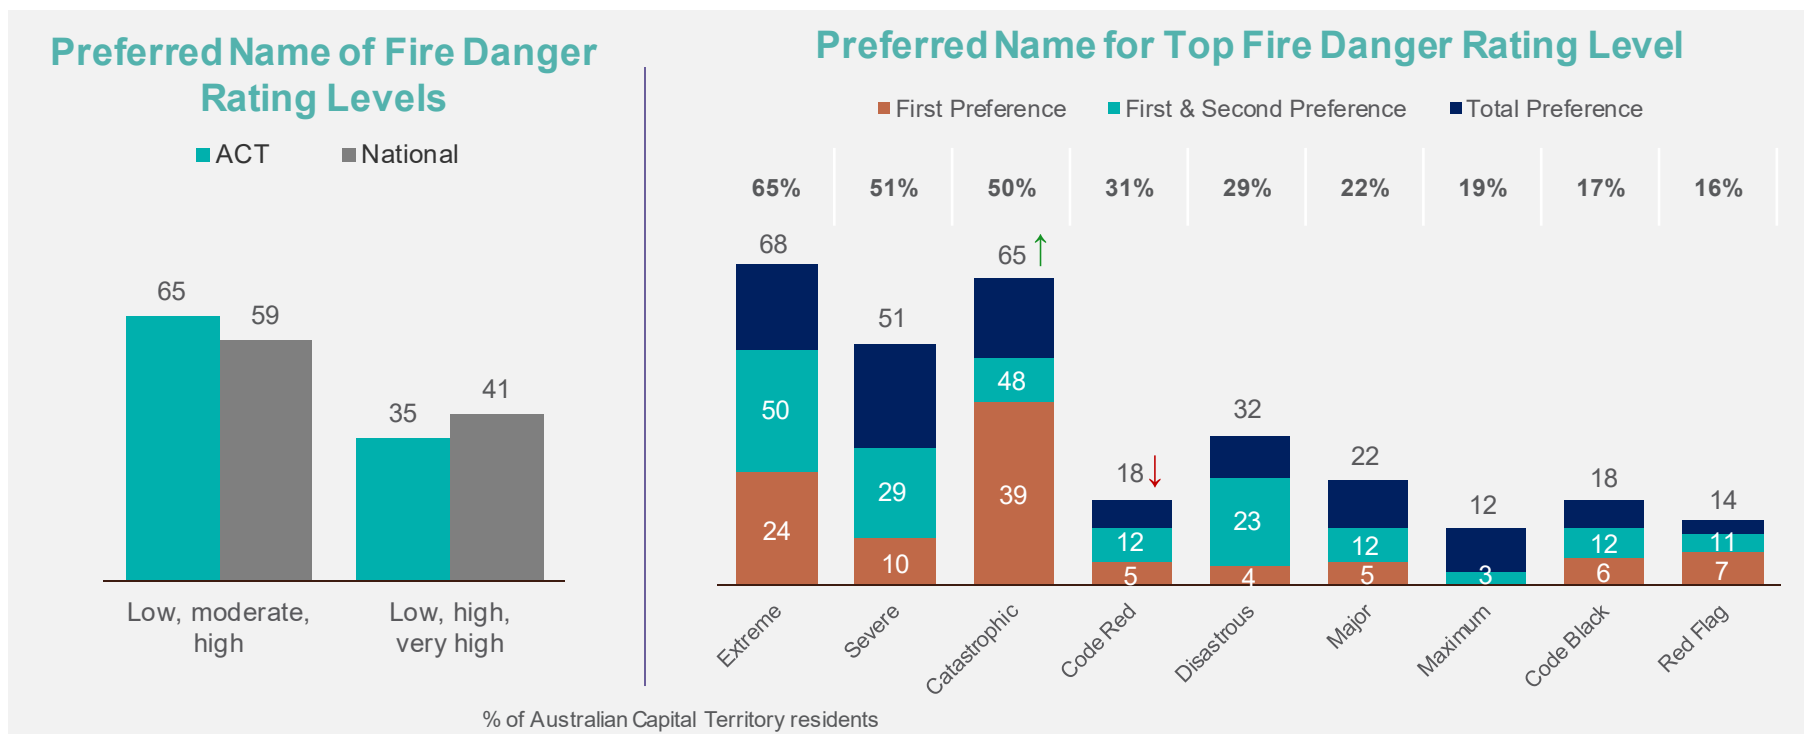

ACT n=100 | National n=5,408
Q4a - Thinking about the purpose of this system (i.e. to effectively prompt individuals to take action), which of the following word-sets best communicates bushfire risk from least to most danger for the first 3 levels?
Q4b - Now please rank the following options from most to least preferred to communicate the highest level of bushfire danger.

↑↓ Significant difference to National figures at 95% confidence

Preferred naming of the top rating is broadly consistent across jurisdictions

Preferred Name for Top Fire Danger Rating Level by Jurisdiction | Top Three Preference

Legend: ——— Extreme ——— Severe ——— Catastrophic ——— Code Red ——— Disastrous ·········· Major – – – Maximum – – – Code Black – – – Red Flag

% of residents

	NSW	VIC	QLD	SA	WA	TAS	NT	ACT
Extreme	63	63	69	65	70	65	71	68
Severe	51	46	54	44	55	45	65	51
Catastrophic	52	44	48	66	51	63	55	65

Q4b - Now please rank the following options from most to least preferred to communicate the highest level of bushfire danger.

metrix

Stage 3
Quantification of
Optimised Models

Action orientated statements are preferred to ensure supporting messages are effective

Australian Capital Territory residents have a significantly higher preference towards *'Know what to do'* to support a Low rating, compared to the national average.

Top Two Supporting Messages for Desired Levels of the Fire Danger Rating

	Low		**Moderate**		**High**		**Extreme**	
National |	35%	34%	28%	19%	32%	26%	36%	23%

Low: Prepare so you are ready if a fire starts — 22↓; Know what to do — 47↑

Moderate: Be ready to act — 35; Stay alert — 14

High: Take action — 37; Be ready to leave — 26

Extreme: Leave high risk areas — 31; Take action now — 31

% of Australian Capital Territory residents
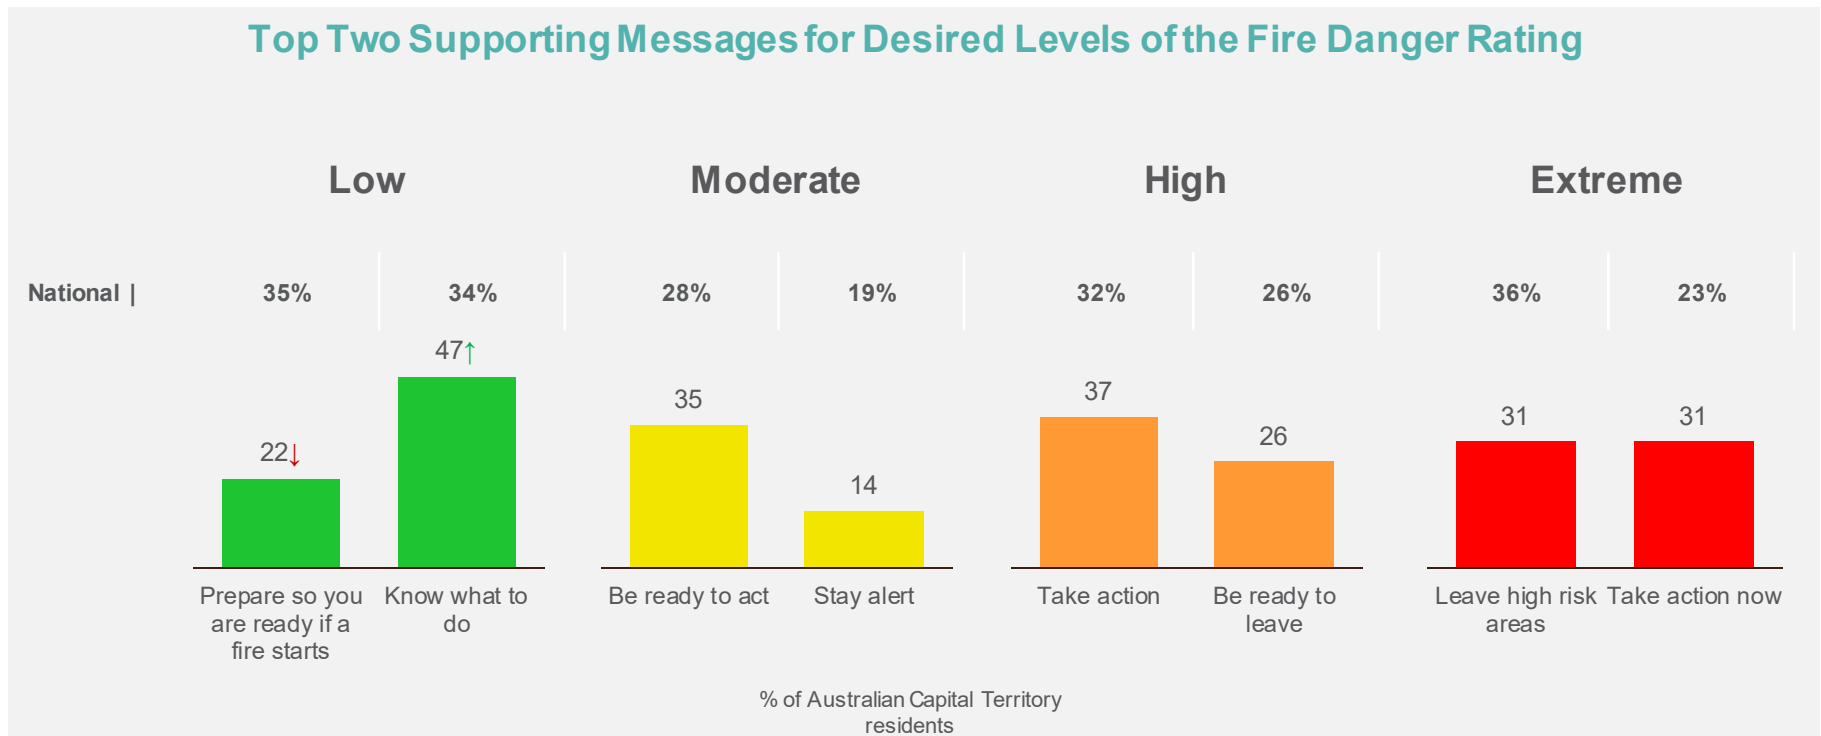

ACT n=100 | National n=5,408

Q5a - Which of the following would be most effective to encourage you to take action and stay safe at each Fire Danger Rating?

↑↓Significant difference to National figures at 95% confidence

Note: Extreme has been used to describe the highest rating as the majority preference nationally.

metrix

Fire Danger Level was the first preference for the overarching name for the system

However it should be noted that order biases could have been experienced due to the use of the word 'level' throughout the question wording in the survey. Once the final system is agreed upon, we would recommend conducting a monadic preference question in a national omnibus to confirm these findings.

First Preference Name for the National System

■ First Preference ■ Second ■ Third

| National \| | 65% | 58% | 51% | 37% | 33% | 30% | 26% |

% of Australian Capital Territory residents
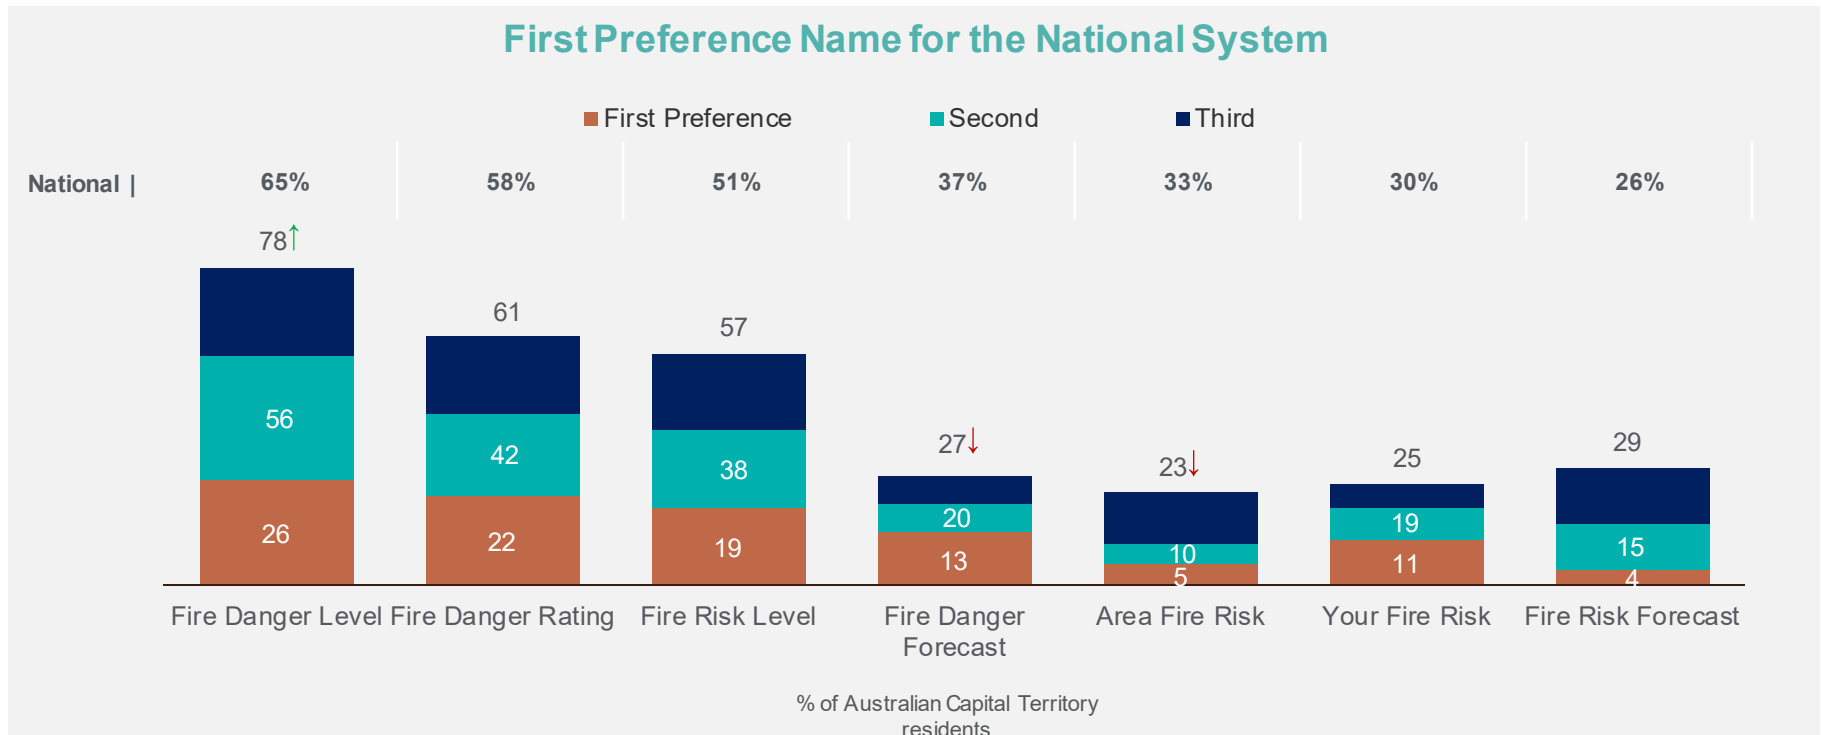

ACT n=100 | National n=5,408

Q5b - When Fire Danger Ratings are displayed on signs and other visual means, which of the following is most effective to describe ratings?

↑↓ Significant difference to National figures at 95% confidence

29

metrix

Though the majority would prefer ratings to update with conditions, there is danger in overcomplicating the system

Preference for Number of Daily Communications of Fire Danger Ratings

■ ACT   ■ National

Category	ACT	National
Variable ratings throughout the day	45	53
Single rating for the day (highest rating)	45↑	35
No preference	10	11

% of Australian Capital Territory residents
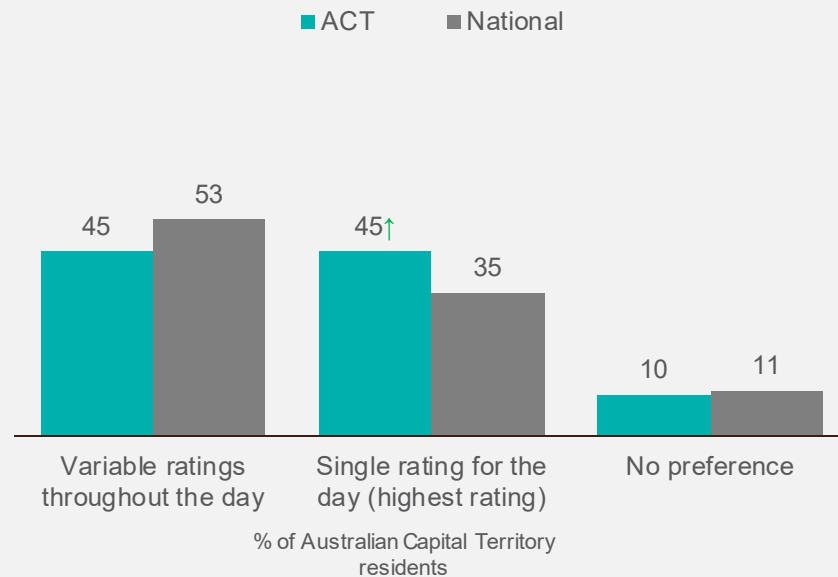

As found in Stage 1 and 2 of the research, there are issues surrounding the comprehension of the system. Variable messaging throughout the day has the potential to amplify these issues.

If variable messaging is to be used, this would need to be a key focus of the education and communications strategy due to its large departure from the existing system. All residents would have to re-learn how to use and respond to ratings.

ACT n=100 | National n=5,408

Q5c - If the Fire Danger Rating varied throughout the day (e.g. Low in the early morning and High in the hottest part of the day) would you prefer to be told a single rating for the day (highest rating), or receive multiple ratings throughout the day?

↑↓Significant difference to National figures at 95% confidence

metrix

An Optimised Multi Hazard Warning System

Quantification through Stage 3 online survey

metrix

Development of the optimisation survey was an inclusive process between Metrix and the Project Steering Group

Workshops were held to finalise the optimisation survey bringing together findings from Stage 1 and 2 research and knowledge from subject matter experts.

Warning shape, icon sets and colour sets were drawn direct from research findings. Potential word sets were tested with the highest level of warning set at 'Emergency Warning'. As the majority issue was with 'Watch and Act' as an instruction, participants were also asked a ranked preference question with both 'Advice' and 'Emergency Warning' locked.

Warning systems were designed for bushfire, cyclone, flood, extreme weather and extreme heat to ensure a multi hazard approach.

metrix

The optimisation survey included five main development stages

Prior to developing their warning system, participants were provided with a description of the system's purpose along with how warnings are currently communicated. Each participant was randomly assigned a natural hazard to create their warning system.

Shape

To set the base of their design, participants chose their preference between a triangle and diamond as the shape for the system.
Icon

Participants were asked to select an icon set from a hazard specific icon (e.g. flame), a hazard specific icon that visually showed increasing severity, or an action specific icon set (similar to that used in Victoria).

Colour

Participants chose the colour set that best communicated the escalation of warning and that would encourage action. Three colour sets were developed using findings from Stage 2.

Word Set

Word sets were developed based on findings from Stage 2 the first two levels of warning. Participants were asked two questions, a single response, and a ranked top 3 preference to understand the most intuitive warning names.

Supportive Message

Finally, participants were asked to select the supportive message for each level of warning that would be most effective to encourage them to take action.

Please note that the questionnaire has been included in the appendix (page 75).

metrix

While preference for shape is split, the majority feel hazard specific icons that increase in severity is effective

Perceptions of the most effective icon are consistent across hazard type, except for Extreme Heat, where approximately nine-in-ten (87%) residents felt action specific icons were most effective. Preference for action specific icons for Extreme Heat is consistent across all states, except Victoria and New South Wales.

Q7. Which of the following variations of shape would be most effective when showing a [insert hazard] warning?
Q8. Which of the following options would be most effective when showing a [insert hazard] warning?

↑↓ Significant difference to National figures at 95% confidence

metrix

The most effective colour set varies by hazard type, though a warm palette is most intuitive for most

We recommend that a palette of yellow-orange-red is used to show escalation of risk. Red is associated with high danger, supported by previous stages of research. Black is currently used to communicate prescribed burns and showing the burn areas on mapping platforms. This aligns with Stage 2 research showing associations with burnt areas and post danger. Blue is currently used for bushfires but isn't supported in survey data, it is not recommended for use.

Preferred Colour Set

ACT | **National**

- Yellow, orange, red: 36 (ACT), 35 (National)
- Yellow, red, black: 38 (ACT), 36 (National)
- Blue, yellow, red: 26 (ACT), 29 (National)
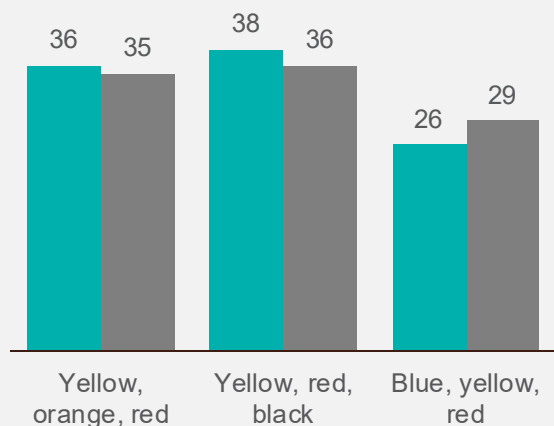

Preferred Colour Set by Hazard Type

Yellow, red, black — Yellow, orange, red — Blue, yellow, red

	Bushfire	Cyclone	Flood	Severe Storm	Extreme Heat
Yellow, red, black	50	45	30	34	20
Yellow, orange, red	47	30	25	33	40
Blue, yellow, red	3	25	45	33	40

% of Australian Capital Territory residents

% of General Population
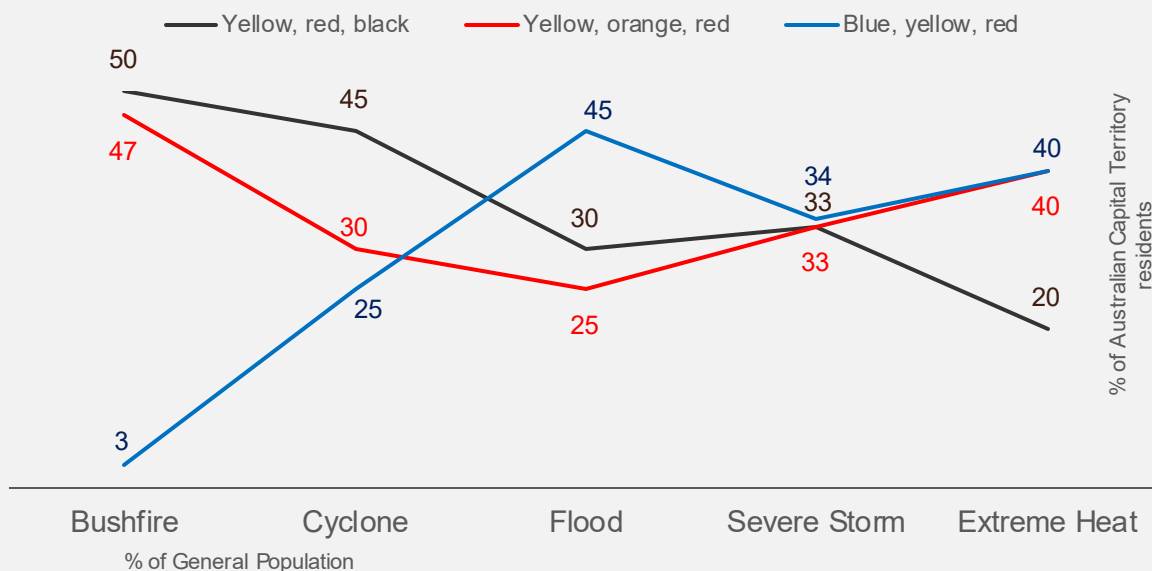

ACT n=100 | National n=5,408

Q9. Now, which of these three colour sets best communicates increasing [insert hazard] risk and would encourage you to take action when a warning is issued?

↑↓Significant difference to National figures at 95% confidence

35

metrix

There are no clear-cut preferences for warning names

Stage 2 research highlighted that the first level of warning is associated with alerting the community that something is happening and to seek information and/or monitor conditions. This correlates with preferences for names such as warning and alert. The most effective warning names for the second level centre around the word 'act' suggesting this is key for inclusion. Though familiar and top of mind, Stage 2 highlighted the significant confusion associated with 'Watch and Act' suggesting maintaining the name poses a risk to community understanding.

Preferred Name for First Warning Level Top 5

% of Australian Capital Territory residents
ACT n=100 | National n=5,408
Q10a. If the highest level of risk is named EMERGENCY WARNING, which of the following words best communicates the first two levels?

↑↓ Significant difference to National figures at 95% confidence

metrix

'Reduced threat' is seen to effectively communicate a warning de-escalation message

Although this is the first time a de-escalation message has been explored nationally, findings are consistent across jurisdictions. Among Australian Capital Territory residents, 'Reduced Threat' is seen to be most effective across all hazards - bushfires (60%), cyclones (45%), floods (50%), severe storms (60%) and extreme heat (46%).

Name to Indicate that Danger has Lessened

— Reduced threat   — Reduced risk   — All clear

% of residents

	NSW	Vic	QLD	SA	WA	Tas	NT	ACT	Overall

Appendices

metrix

Appendix 1:
Behaviour Change Model

metrix

The behaviour change model underpins thinking on hazard preparedness and response to forecast and warning systems
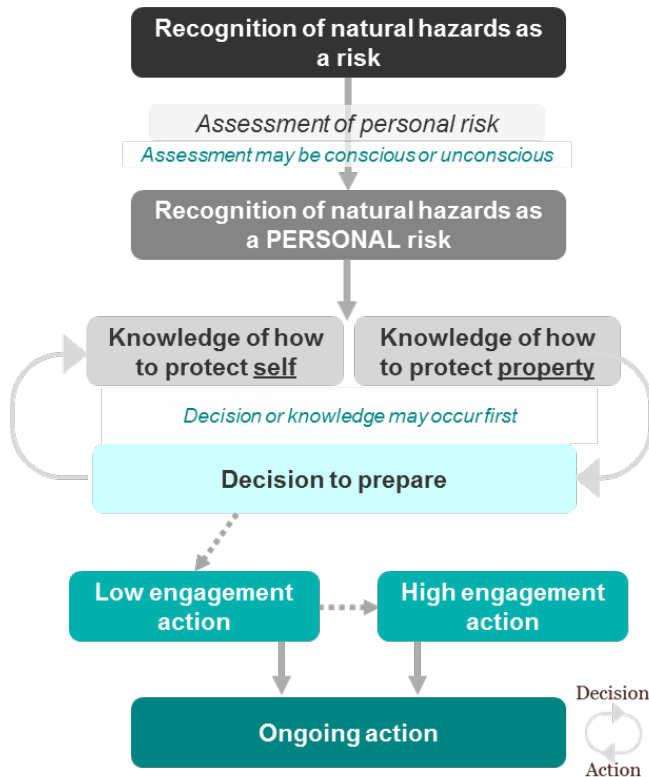

The natural-hazard behaviour change was developed from the transtheoretical model, but differs in three ways.

1. Recognition of risk is more **complex**, and transitions from general risk recognition, through (typically) an assessment of personal risk, to recognition of what that level of personal risk is.

2. The decision to prepare does not always follow knowledge – in some cases, it may precede it – typically where geography (at-risk location) and/or cultural background (upbringing) play a part.

3. Action is separated into two distinct categories; with the decision to take low engagement actions often made without a connection to natural hazards preparation.

Risk recognition and behaviour is strongly influenced by the type and location of an individuals home

This is a national trend. Risk recognition is highest amongst those living in regional areas, which tend to be larger properties with stand alone homes.

Property size

Perception of risk increases with property size.

Metro / regional location

Those in regional locations tend to have greater risk recognition and actions taken regarding hazard response preparation.

Distance to bushland

For bushfires - perception of risk increases the closer distance to open bushland or grassland areas.

Home type

Those with standalone homes have greater risk recognition than those in shared buildings.

Exposure to Hazards in the Past

Where there is limited visibility of recent incidents, or an emergency warning has not been issued for a number of years, individuals become complacent and perception of risk decreases.

Distance to water

For water based hazards - perception of risk increases the closer distance to open water areas.

metrix

Six-in-ten residents recognise personal risk from bushfires, while half have decided or plan to prepare for a bushfire

Recognition of risk from severe storms and extreme heat is stronger, with six-in-ten stating they have knowledge on how to respond to warnings.

Australian Capital Territory Behaviour Change Model

	Bushfire	Cyclone	Flood	Severe Storms	Extreme Heat
Risk Recognition	90	8	16	58	74
Personal Risk Recognition	59	11	21	56	66
Knowledge on how to respond to warnings	57	8	19	53	65
Decision to prepare	50	8	15	37	47
Future intention to prepare	27	2	4	20	34

Low ratings for cyclones would likely be a result of the low incidence of the hazard in the Australian Capital Territory.

Appendix 4
Fire Danger Rating definition

metrix

Fire Danger Rating purpose

Definition provided by the South Australian Country Fire Service for focus groups.

The Fire Danger Rating tells you how dangerous a fire would be if one started. The higher the Fire Danger Rating, the more dangerous the fire conditions.

Fire Danger Ratings indicate how difficult it will be to control a fire under the forecast weather conditions.

It is not a predictor of how likely a bushfire is to occur.

Ratings are forecast using Bureau of Meteorology data for up to four days in advance, based on weather and other environmental conditions such as fuel load.

The Rating is your prompt to take action to stay safe.

The Fire Danger Rating should be used as an early indicator to trigger your plans.

The Fire Danger Rating table will help you understand the predicted bushfire behaviour, potential impacts and recommended actions you should take for each category level (e.g. CFS web page Fire Danger Ratings based on Appendix 3 of the National Framework for Scaled Advice and Warnings to the Community).

metrix

Fire Danger Rating purpose

Definition provided by the South Australian Country Fire Service for Stage 3 quantitative survey.

INTRODUCTION 1

The first section of questions will be asking you about Fire Danger Ratings. This is a **forecast system** used to inform the community of how dangerous a bushfire would be **if** one started. It is **not** an indicator that a bushfire has started.

There are a number of ratings that **indicate how difficult it will be to control a fire** under the forecast weather conditions. The higher the Fire Danger Rating, the more dangerous the fire conditions.

Though there are multiple Fire Danger Ratings to show increasing danger, only a single rating will be issued to show the bushfire danger for that day.

Ratings are forecast using Bureau of Meteorology data for up to four days in advance, based on weather (e.g. temperature and wind) and other environmental conditions such as how much dry grass and undergrowth there is.

The Fire Danger Rating should be used as an early indicator to trigger you to take action and stay safe.

INTRODUCTION 2

You may see or hear the Fire Danger Rating in a number of ways, including:
- Interactive online maps
- Official Websites and Apps
- Social Media (e.g. Facebook)
- TV
- Text messages
- Roadside signage
- Radio

The existing system is being reviewed to ensure the design is highly effective at **prompting you to take action** to protect against the risk of bushfires.

Research has been conducted nationally to develop a set of potential designs for the new system. **In the following questions we'd like you to select from these designs based on what you think is the most effective system to promote action.**

ACT	100	
NT	100	
TOTAL PER VERSION	5400	

Send out all survey invitations in line with the population profile – age, gender, income, region etc.

PROGRAMMER INSTRUCTIONS

○	Denotes single response question
☐	Denotes multiple response question

Thank you for agreeing to take part in this **15** minute survey regarding alerts and warnings for **natural hazards in Australia**. All information you provide will remain completely confidential and only be used for research purposes.

When completing the survey please read each question carefully, answer the questions below as accurately as you can and select the answers that best reflect your views. Some questions allow more than one answer. There are also several opportunities to type in open-ended responses. To move to the next question, click on the next button at the bottom of the screen, please note that there is no opportunity to go back to a previous question once you have moved to the next page.

SECTION 1 – SCREENING

S1	Do you, a relative or a close friend work or have recently worked: **RANDOMISE**	In market research	**Terminate**	☐ 01
		In advertising or media	**Terminate**	☐ 02
		In emergency services (e.g. police, firefighter, ambulance)	**Terminate**	☐ 03

		Other	⭕ 03

S4	What is your postcode? **PROGRAMMER – RESTRICT TO NUMERIC, 4 DIGITS** **TERMINATE IF DO NOT FALL INTO AU POSTCODE RANGE**	

CREATE HIDDEN VARIABLE BASED ON LOCATION TO MATCH GEOGRAPHICAL SEGMENT

SECTION 2 – Recognition of Risk

Q1	Which of the following natural hazards do you believe are a risk in **[insert jurisdiction]**? **RANDOMISE, LOCK CODE 98 AT BOTTOM**	Bushfire ☐ 01
		Cyclone ☐ 02
		Flood ☐ 03
		Severe Weather - Severe Storms ☐ 04
		Severe Weather - Extreme Heat ☐ 05
		Other (please specify) ☐ 06
		None of the above ○ 98

SECTION 3 – Recognition of Personal Risk

Q2   What level of <u>**personal risk**</u> do you associate with each of the following natural hazards?

	a. Bushfire	b. Cyclone	c. Flood	d. Severe Storms	e. Extreme Heat
No risk to me *I feel that it is **not** a risk to me at all*	○ 1	○ 1	○ 1	○ 1	○ 1
Low risk to me I feel **very little** personal risk *(e.g. Don't live, work or travel in an at-risk area, I am well prepared, hazards are infrequent, etc.)*	○ 2	○ 2	○ 2	○ 2	○ 2
Moderate risk to me I feel **some risk** *(e.g. Hazards are unpredictable, I may be prepared, I live, work or travel in an area of some risk, etc.)*	○ 3	○ 3	○ 3	○ 3	○ 3
High risk to me I feel I am **at risk** *(e.g. Live, work or travel in a high-risk area, hazards occur frequently, I am not prepared, etc.)*	○ 4	○ 4	○ 4	○ 4	○ 4

Ask if DO NOT recognise personal risk - Codes 1-2 @ Q2

Q3	Why do you feel you are not at **personal risk** from these hazards?

RANDOMISE, LOCK CODES 4 AT BOTTOM.

	a. Bushfire	b. Cyclone	c. Flood	d. Severe Storms	e. Extreme Heat
This hazard doesn't occur in the part of **[INSERT JURISDICTION]** where I live, work or travel	☐ 1	☐ 1	☐ 1	☐ 1	☐ 1
My type of property isn't at risk of this hazard	☐ 2	☐ 2	☐ 2	☐ 2	☐ 2
This hazard has never occurred where I live	☐ 3	☐ 3	☐ 3	☐ 3	☐ 3
Other (specify)	☐ 4	☐ 4	☐ 4	☐ 4	☐ 4

SKIP TO SECTION 8 – ALERTS AND WARNINGS IF <u>ALL</u> CODE 1-2 @ Q2

SECTION 4 – Knowledge

INSERT NATURAL HAZARDS SELECTED CODE 3-4 AT Q2 (RECOGNISE PERSONAL RISK)

Q5	In some situations, you may receive information about the forecast or current danger of a natural hazard. These alerts and/or warnings can come from official sources (e.g. fire service), websites, the media, or by telephone… With this in mind, how **knowledgeable** are you on how to respond and protect yourself if an **alert and/or warning** was **issued** for the following hazards?

	a. Bushfire	b. Cyclone	c. Flood	d. Severe Storms	e. Extreme Heat
I have **no** knowledge	○ 1	○ 1	○ 1	○ 1	○ 1
I have **a little** knowledge	○ 2	○ 2	○ 2	○ 2	○ 2
I have **moderate** knowledge	○ 3	○ 3	○ 3	○ 3	○ 3
I have a **high level** of knowledge	○ 4	○ 4	○ 4	○ 4	○ 4

SKIP TO SECTION 8 – ALERTS AND WARNINGS IF <u>ALL</u> CODE 1 @ Q5 (NO KNOWLEDGE)

SECTION 5 – Decision to Act

Q7 Have you taken, or are you planning to take, any action to prepare yourself to **respond** to an alert and/or warning for the following hazards?

	a. Bushfire	b. Cyclone	c. Flood	d. Severe Storms	e. Extreme Heat
Yes, I have prepared myself	○ 1	○ 1	○ 1	○ 1	○ 1
I have not prepared before, but am planning to	○ 2	○ 2	○ 2	○ 2	○ 2
No, I have no intention to prepare myself	○ 3	○ 3	○ 3	○ 3	○ 3

Ask if NOT made decision to act – Code 3 @ Q7

Q8 Why do you feel you do not need to prepare yourself to respond to an alert and/or warning for the following hazards?

RANDOMISE, LOCK CODE 97 AT BOTTOM.

	a. Bushfire	b. Cyclone	c. Flood	d. Severe Storms	e. Extreme Heat
This hazard doesn't occur in the part of **[INSERT JURISDICTION]** where I live	☐ 1	☐ 1	☐ 1	☐ 1	☐ 1
I am capable of dealing with all the disruptions this hazard might cause	☐ 2	☐ 2	☐ 2	☐ 2	☐ 2
This hazard has never occurred where I live	☐ 3	☐ 3	☐ 3	☐ 3	☐ 3
It is too difficult to prepare	☐ 4	☐ 4	☐ 4	☐ 4	☐ 4
I have other priorities	☐ 5	☐ 5	☐ 5	☐ 5	☐ 5
It's too expensive to prepare	☐ 6	☐ 6	☐ 6	☐ 6	☐ 6
It isn't my responsibility to prepare	☐ 7	☐ 7	☐ 7	☐ 7	☐ 7
I feel I need more information on how to prepare	☐ 8	☐ 8	☐ 8	☐ 8	☐ 8
Other (specify)	☐ 97	☐ 97	☐ 97	☐ 97	☐ 97
SKIP TO SECTION 8 – ALERTS AND WARNINGS IF <u>ALL</u> CODE 3 @ Q7 (NO DECISION TO ACT)					

SECTION 7 – Ongoing Action

INSERT NATURAL HAZARDS SELECTED CODE 1-2 AT Q7 (DECISION TO ACT)

Q12 Thinking ahead, how often do you anticipate you will prepare to protect yourself when an alert and/or warning is issued for the following natural hazards?

	a. Bushfire	b. Cyclone	c. Flood	d. Severe Storms	e. Extreme Heat
Yearly or more frequently	O 1	O 1	O 1	O 1	O 1
Every 2 years	O 2	O 2	O 2	O 2	O 2
Every 3 years	O 3	O 3	O 3	O 3	O 3
Every four years	O 4	O 4	O 4	O 4	O 4
Every 5 years or less frequently	O 5	O 5	O 5	O 5	O 5

SECTION 8 – ALERTS AND WARNINGS

We'd now like to get some more information regarding natural hazard alert and/or warning systems you may be aware of.

Each natural hazard – bushfire, cyclone, flood, and severe weather (e.g. severe storms, extreme heat) – will be examined one at a time.

BUSHFIRE

Q13a	Thinking about bushfires, do you recall any messaging from [jurisdiction] about days of increased bushfire risk?	Yes, seen **and** heard	O 01
		Yes, heard only	O 02
		Yes, seen only	O 03
		No, I have not seen or heard of this	O 04

Q13b	Which of the following statements best describes what the Fire Danger Rating is?	Predicts how **likely** a fire is to **occur**	O 01
		Predicts **how dangerous** a fire could be **if** it **did occur**	O 02
		Don't know	O 99

[EXAMPLE IMAGE ONLY – SEE SEPARATE FILE FOR IMAGES BY JURISDICTION]
DISPLAY RATING SCALE ON THE RIGHT-HAND SIDE OF THE SCREEN

Q13c	A fire danger rating system is used to advise the community of the level of **bushfire** danger on a particular day, based on the forecast weather conditions. The rating levels are: Low-moderate, High, Very High, Severe, Extreme, [Catastrophic / Code Red – Victoria only]. Have you seen or heard of these fire danger ratings before today?	Yes, seen *and* heard ○ 01 Yes, heard only ○ 02 Yes, seen only ○ 03 No, I have not seen or heard of this ○ 04

KEEP IMAGE OF FDRS ON SCREEN

Q13d Thinking about the **Fire Danger Rating System** (FDRS) shown, how strongly do you agree or disagree with the following statements.

RANDOMISE

	Strongly disagree	Disagree	Neither agree nor disagree	Agree	Strongly agree
1 The FDRS is **confusing**	○ 1	○ 2	○ 3	○ 4	○ 5
2 The FDRS is **relevant** to me	○ 1	○ 2	○ 3	○ 4	○ 5
3 I **use** the FDRS to plan my days in summer	○ 1	○ 2	○ 3	○ 4	○ 5
4 The FDRS **encourages** me to **take action**	○ 1	○ 2	○ 3	○ 4	○ 5
5 The FDRS has **too many** levels	○ 1	○ 2	○ 3	○ 4	○ 5
6 I **see** FDRS **displayed** in my local community	○ 1	○ 2	○ 3	○ 4	○ 5

Q14	Have you taken any action in the past after seeing or hearing the Fire Danger Rating level?	Yes ○ 01 No ○ 02

KEEP IMAGE OF FDRS ON SCREEN
ASK IF CODE 1 @ Q14

Q15	Thinking about the **last** time you took action, at what Fire Danger Rating level did you take action; what actions did you take and why?	**RATING LEVEL** Low-Moderate ○ 1 High ○ 2 Very High ○ 3 Severe ○ 4	**ACTION TAKEN** OPEN _____

Please provide as much detail as possible including what the event/incident was, what you felt the warning was telling the community, and what actions you took. **PROGRAMMING NOTE – code 6 read 'Code Red' for Victoria**	Extreme ⭘ 5 Catastrophic ⭘ 6 Don't know ⭘ 99

SECTION 9 – FINAL PROFILING

And just a few final questions about yourself.

D1	Which of these best describes your household?	Young person living at home with parents	O 01
		Young single/couple – no children at home	O 02
		Single/couple with youngest child under the age of 6 yrs	O 03
		Single/couple with youngest child between 6 and 12 yrs	O 04
		Single/couple with youngest child 13 yrs+	O 05
		Older single with no children at home	O 06
		Older couple with no children at home	O 07
		Other	O 08
		Prefer not to answer	O 99

D1b	Do you identify with any of the following groups?	Person living with a disability	☐ 01
		Primary carer for someone with a disability	☐ 02
		None of the above	O 98

D1c	Do you identify as?	Aboriginal	☐ 01
		Torres Strait Islander	☐ 02
		Aboriginal and Torres Strait Islander	☐ 02
		None of the above	O 98

D2	Which of the following best applies to you?	Own my home (no mortgage)	○ 01
		Paying off my home (have a mortgage)	○ 02
		Renting	○ 03
		Other (e.g. live with parents/ boarding)	○ 04
		Prefer not to answer	○ 99

D3	Which of these best describes your current employment situation?	Working full time	○ 01
		Working part-time/casual	○ 02
		Unemployed	○ 03
		Student	○ 04
		Retired	○ 05
		Home duties	○ 06
		Prefer not to answer	○ 99

D4	Do you currently have home, contents or business insurance?	Contents insurance	☐ 01
		Home insurance	☐ 02
		Business insurance	☐ 03
		I have no insurance	○ 04

D5	What is the size of your property?	Small - Less than ¼ acre (less than 1,100m2)	○ 01
		Medium - Between ¼ and 1 acre (1,010m2-4,040m2)	○ 02
		Large - Between 1 and 10 acres (4,040m2-40,400m2)	○ 03
		Regional – Larger than 10 acres	○ 04

D6	Which of the following property type is your home?	Standalone house	○ 01
		Duplex/townhouse	○ 02
		Unit/apartment	○ 03
		Transportable house	○ 04

D7a	How far is your home from the nearest bushland or grassland area (an area of forest, trees, bush or	Less than 100 metres	○ 01
		Between 100 and 500 metres	○ 02
		Between 500 metres and 1 km	○ 03

grasslands)?	Further than 1km	O 04

D7b	How far is your home from the nearest river or coast		
		Less than 100 metres	O 01
		Between 100 and 500 metres	O 02
		Between 500 metres and 1 km	O 03
		Further than 1km	O 04

D8	Were you born or did you spend your childhood years living in Australia?		
		Yes, I was born in Australia	O 01
		I was not born in Australia but spent my childhood years living here	O 02
		No, I did not move to Australia until I was an adult	O 03
		Other (specify)	O 04

D9	What personal experience have you had with the following hazards? **RANDOMISE** **LOCK CODE 6 AT THE BOTTOM**

	a. Bushfire	b. Cyclone	c. Flood	d. Severe Storms	e. Extreme Heat
I **was injured** due to this hazard	☐ 1	☐ 1	☐ 1	☐ 1	☐ 1
I have had **property damage** from this hazard	☐ 2	☐ 2	☐ 2	☐ 2	☐ 2
I have had to **evacuate** due to this hazard	☐ 3	☐ 3	☐ 3	☐ 3	☐ 3
I have experienced this **close to my home** but did not have to evacuate	☐ 4	☐ 4	☐ 4	☐ 4	☐ 4
I have ongoing **trauma or stress** due to this hazard	☐ 5	☐ 5	☐ 5	☐ 5	☐ 5
I have no personal experience with this hazard	O6	O 6	O 6	O 6	O 6

2337 – SA CFS – NFDRS and Warnings Systems

Stage 3 | Online Survey | Creative Optimisations of Systems

Client Contact Name:	Fiona Dunstan, Peta O'Donohue, Andrew Stark
Version:	V3 29.04.19
Methodology:	Online
Survey Length:	20 minutes

	Quotas	
Jurisdiction	**Metro**	**Regional**
QLD	400	600
NSW	500	500
VIC	600	400
SA	800	200
WA	500	500
TAS	200	
ACT	100	
NT	100	
TOTAL PER VERSION	**5400**	

NOTE – The survey will be pilot tested with n=150 from each major jurisdiction (QLD, NSW, VIC, SA, WA) giving n=750 total sample; then paused for initial FDR analysis. Should there be clear FDR designs leading amongst responses, the FDR section will be adjusted to monadic or triad testing for the remaining sample of n=4,650.

Send out all survey invitations in line with the population profile – age, gender, income, region etc.

PROGRAMMER INSTRUCTIONS

○	Denotes single response question
□	Denotes multiple response question

Thank you for agreeing to take part in this **20-minute** survey regarding how the community receives forecasts and warnings for **natural hazards in Australia**. Please note that you may be asked about a natural hazard that is not the primary risk in your area.

All information you provide will remain completely confidential and only be used for research purposes.

When completing the survey please read each question carefully, answer the questions as accurately as you can and select the answers that best reflect your views. Some questions allow more than one answer. There are also several opportunities to type in open-ended responses. To move to the next question, click on the next button at the bottom of the screen, please note that there is no opportunity to go back to a previous question once you have moved to the next page.

CREATE HIDDEN VARIABLE BASED ON LOCATION TO MATCH GEOGRAPHICAL SEGMENT

PROGRAMMING NOTE:
- **10 SECOND TIMER ON EACH INTRODUCTION PAGE**

INTRODUCTION 1

The first section of questions will be asking you about Fire Danger Ratings. This is a **forecast system** used to inform the community of how dangerous a bushfire would be **if** one started. It is **not** an indicator that a bushfire has started.

There are a number of ratings that **indicate how difficult it will be to control a fire** under the forecast weather conditions. The higher the Fire Danger Rating, the more dangerous the fire conditions.

Though there are multiple Fire Danger Ratings to show increasing danger, only a single rating will be issued to show the bushfire danger for that day.

Ratings are forecast using Bureau of Meteorology data for up to four days in advance, based on weather (e.g. temperature and wind) and other environmental conditions such as how much dry grass and undergrowth there is.

The Fire Danger Rating should be used as an early indicator to trigger you to take action and stay safe.

Q1a	Based on this description, have you heard of the Fire Danger Rating System before today?	Yes _____ ○ 1 No _____ ○ 2 Don't Know _____ ○ 99

PROGRAMMING NOTE:
- **ASK IF CODE 1 @ Q1a (YES)**
- **NUMERIC ENTRY FIELD**

Q1b	How many Fire Danger Rating levels are there in the existing system?	[_____] levels Don't Know _____ ○ 99

INTRODUCTION 2

You may see or hear the Fire Danger Rating in a number of ways, including:
- Interactive online maps
- Official Websites and Apps
- Social Media (e.g. Facebook)
- TV

- Text messages
- Roadside signage
- Radio

The existing system is being reviewed to ensure the design is highly effective at **prompting you to take action** to protect against the risk of bushfires.

Research has been conducted nationally to develop a set of potential designs for the new system. **In the following questions we'd like you to select from these designs based on what you think is the most effective system to promote action.**

PROGRAMMING NOTE:
- **DISPLAY IMAGES WITH TEXT BELOW**
- **RANDOMISE ORDER OF SHAPES SHOWN**

Q2	Firstly, we'd like you to think about the following variations of shape when presenting Fire Danger Ratings as a sign or picture (e.g. online or roadside signage). The new system will have four Fire Danger Rating levels. Each segment within the shapes represents a level. The higher the Fire Danger Rating, the more dangerous the fire conditions. **Which shape would be most effective to communicate the Fire Danger Ratings?** *Click here to view further information on the purpose of this system.*	4 stage semi-circle ⃝ 1 4 stage rectangle ⃝ 2 4 stage triangle ⃝ 3

PROGRAMMING NOTES:
- **DISPLAY IMAGE OF OPTION SELECTED AT Q3 AT TOP OF PAGE**
- **DISPLAY Q4A AND Q4B ON THE SAME PAGE**

Q4a	Thinking about the purpose of this system (i.e. to effectively prompt individuals to take action), which of the following word-sets best communicates bushfire risk from least to most danger for the first 3 levels? *Click here to view further information on the purpose of this system.* **ROTATE**	Low, moderate, high ⟶ O 01 Low, high, very high ⟶ O 02

Q4b	Now please rank the following options from most to least preferred to communicate the highest level of bushfire danger. **RANKED PREFERENCE – LIMIT TO 3** **RANDOMISE**	Extreme ⟶ O 01 Severe ⟶ O 02 Catastrophic ⟶ O 03 Code Red ⟶ O 04 Major ⟶ O 05 Maximum ⟶ O 06 Disastrous ⟶ O 07 Red Flag ⟶ O 08 Code Black ⟶ O 09

Q5a	An additional instruction will accompany each Fire Danger Rating. Which of the following would be **most effective** to encourage you to take action and stay safe at each Fire Danger Rating?		
Insert level 1 response from Q4a	Insert level 2 response from Q4a	Insert level 3 response from Q4a	Insert #1 response from Q4b
• Know what to do • Be aware that fires can start • Prepare so you are ready if a fire starts •	• Be ready to act • Stay informed • Know what you will do • Stay alert • Monitor conditions • Be prepared	• Take action • Be ready to leave • Conditions can change quickly • If a fire starts, take action right away • Know where you will go • Protect your life and property	• Leave high risk areas • Protect your life • Take action now • Know how to stay safe • Leave the night before or early on the day • Conditions will change quickly

Q5b	When Fire Danger Ratings are displayed on signs and other visual means, which of the following is **most effective** to describe ratings?	Fire Danger Forecast	O 1
		Your Fire Risk	O 2
		Fire Risk Level	O 3
	Please rank your top three preferences.	Fire Danger Rating	O 4
		Fire Danger Level	O 5
	RANKED PREFERENCE – LIMIT TO 3	Area Fire Risk	O 6
		Fire Risk Forecast	O 7
	RANDOMISE		

Q5c	If the Fire Danger Rating varied throughout the day (e.g. Low in the early morning and High in the hottest part of the day) would you **prefer** to be told a **single rating** for the day (highest rating), or receive **multiple ratings throughout the day**?	**Single rating** for the day (highest rating)	O 01
		Variable ratings throughout the day	O 02
		No preference	O 03

PROGRAMMING NOTES:
- **QUESTIONS TO BE ASKED OF <u>ONE</u> NATURAL HAZARD ONLY**
- **RANDOMISE SELECTION OF HAZARD**
- **Weighting of hazard to be confirmed, initial recommendation as:**
  - **30% bushfire, 25% flood, 25% cyclone, 10% severe storm, 10% extreme heat**
- **10 SECOND TIMER ON EACH INTRODUCTION PAGE**

BUSHFIRE --

INTRODUCTION 1

We'd now like you to think about when a **bushfire has started**.

During a bushfire, you may receive an official warning when there is a potential threat to property or life. The bushfire warning system is made up of a number of levels and the warning level increases to reflect the increasing risk to life.

These warnings act as a trigger for you to take action and protect yourself against the bushfire.

You may see or hear a warning in a number of ways, including:
- Interactive online maps
- Official Websites and Apps
- Social Media (e.g. Facebook)
- TV
- Text messages
- Radio

Warnings include information on the current bushfire situation and outline the actions individuals should take.

Q6a	Based on this description, have you heard of these Bushfire Warnings in the past?	Yes	○ 1
		No	○ 2
		Don't Know	○ 99

PROGRAMMING NOTE:
- **ASK IF CODE 1 @ Q6a (YES)**
- **NUMERIC ENTRY FIELD**

Q6b	Have you ever received one of these warnings before today?	Yes [ ] number received	○ 1
		No	○ 2
		Don't Know	○ 99

INTRODUCTION 2

The existing system is being reviewed to ensure the design is highly effective at prompting individuals to take action to protect against the bushfire that is occurring.

Focus group research has been conducted nationally to develop a set of potential options for the new warning system. **In the following questions we'd like you to select from these options to design the most effective bushfire warning system to promote action.**

When thinking about the warning system keep in mind that only one level of warning will be received at a given time rather than the full system with all levels being shown together.

CYCLONE/FLOOD/EXTREME HEAT/SEVERE STORM --
INTRODUCTION 1

We'd now like you to think about [**cyclones/floods/extreme heat/severe storms**]. Specifically, think about if you were in an area where **[a cyclone/ a flood/extreme heat/a severe storm]** has been forecast to impact.

You may receive an official warning when there is a potential threat to property or life. The **[cyclone/flood/extreme heat/severe storms]** warning system is made up of a number of levels and the warning level increases to reflect the increasing risk to life.
These warnings act as a trigger for you to take action and protect yourself against the danger.

You may see or hear a warning in a number of ways, including:
- Interactive online maps
- Official Websites
- Social Media (e.g. Facebook)
- TV
- Text messages
- Radio

Warnings issued include information on the current situation and outline the actions individuals should take.

PROGRAMMING NOTE: SHOW FOR CYCLONE ONLY

You may have heard of terms such as Category 1, Category 2, etc. to describe the severity of cyclones. These warnings are designed to show the severity of a cyclone and differ from the community warning system we'd like you to review. Category information will be issued within the warnings we are asking you to review.

PROGRAMMING NOTE: SHOW FOR FLOOD ONLY

You may have heard of terms such as Minor, Moderate or Major Flooding to describe the severity of floods. These warnings are designed to show the severity of a flood and differ from the community warning system we'd like you to review. Severity information will be issued within the warnings we are asking you to review.

Q6a	Based on this description, have you heard of these [Cyclone/Flood/Extreme Heat/Severe Storm] Warnings in the past?	Yes	○ 1
		No	○ 2
		Don't Know	○ 99

PROGRAMMING NOTE:
- **ASK IF CODE 1 @ Q6a (YES)**
- **NUMERIC ENTRY FIELD**

Q6b	Have you ever received one of these warnings before today?	Yes	○ 1
		No	○ 2
		Don't Know	○ 99

INTRODUCTION 2

The existing system is being reviewed to ensure the design is highly effective at prompting individuals to take action to protect against potential danger.

Focus group research has been conducted nationally to develop a set of potential options for the new warning system. **In the following questions we'd like you to select from these options to design the most effective warning system to promote action.**

When thinking about the warning system keep in mind that only one level of warning will be received at a given time rather than the full system with all levels being shown together.

PROGRAMMING NOTE:
- **DISPLAY IMAGES WITH TEXT BELOW**
- **ROTATE ORDER OF SHAPES SHOWN**

Q7	A core of three levels will be used for the warning system. Which of the following variations of shape would be most effective when showing a **[bushfire, cyclone, flood, extreme heat, severe storm]** warning? *Click <u>here</u> to view further information on the purpose of this system.*	3 stage triangle	○ 1
		3 stage diamond	○ 2

TRIANGLES	**DIAMONDS**
EXAMPLE IMAGES (see separate document for high resolution versions)
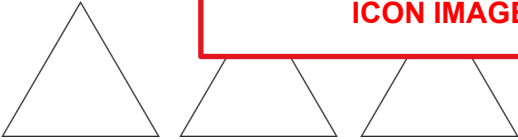

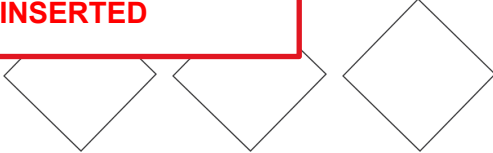

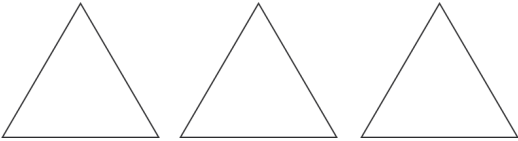

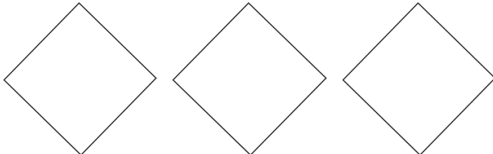

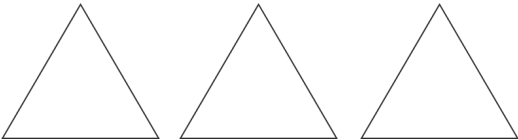

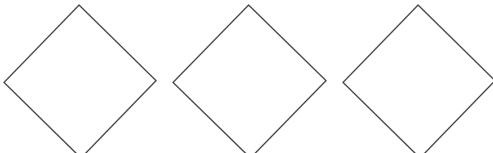

PROGRAMMING NOTE:
- **DISPLAY IMAGES IN SHAPE SELECTED AT Q7**
  - **IF CODE 1 @ Q7 SHOW TRIANGLES**
  - **IF CODE 2 @ Q7 SHOW DIAMONDS**
- **RANDOMISE SHOW ORDER CODES 1-4**

Q8	The warning system will use icons inside each shape when warnings are issued through visual channels (e.g. TV, social media, online interactive maps). Which of the following options would be most effective when showing a **[bushfire, cyclone, flood, extreme heat, severe storm]** warning?	Consistent hazard specific icon	○ 1
		Hazard specific icons with increasing severity	○ 2
		Action specific icon	○ 3

> *Click here to view further information on the purpose of this system.*

**EXAMPLE IMAGES (see separate document for high resolution versions by hazard type)**

ICON IMAGES TO BE INSERTED	
Consistent hazard specific	**Consistent hazard specific**
Hazard specific increasing severity	**Hazard specific increasing severity**
Action specific	**Action specific**

PROGRAMMING NOTES:
- **DISPLAY THE SHAPE AND ICONS SELECTED BASED ON RESPONSE TO Q8 (e.g. triangles with hazard specific icons for Code 1 @ Q8)**
- **DISPLAY IMAGES WITH TEXT OF COLOURS BELOW**

Q9	Now, which of these three colour sets best communicates increasing **[bushfire, cyclone, flood, extreme heat, severe storm]** risk and would encourage you to take action when a warning is issued? *Click here to view further information on the purpose of this system.* **RANDOMISE**	Yellow, orange, red ○ 01 Blue, yellow, red ○ 02 Yellow, red, black ○ 03

EXAMPLE IMAGES (see separate document for high resolution versions)

ICON IMAGES TO BE INSERTED

YELLOW, ORANGE, RED   **BLUE, YELLOW, RED**   **YELLOW, RED, BLACK**

PROGRAMMING NOTES:
- **DISPLAY IMAGE OF OPTION SELECTED AT Q9 AT TOP OF PAGE**
- **INSERT SINGLE RESPONSE SELECTION OPTION UNDER EACH LEVEL**

Q10a Again, thinking about the purpose of this system being to effectively prompt individuals to take action, we'd like you to think about the best words to describe each level.

If the highest level of risk is named EMERGENCY WARNING, which of the following words best communicates the first two levels?

Click here to view further information on the purpose of this system.

RANDOMISE

	Level 1	Level 2	
1 Warning	○ 1	○ 2	
2 Advice	○ 1	○ 2	
3 Monitor	○ 1	○ 2	
4 Alert	○ 1	○ 2	
5 Act	○ 1	○ 2	**Emergency Warning**
6 Prepare	○ 1	○ 2	
7 Act Now	○ 1	○ 2	
8 Watch and Act	○ 1	○ 2	
9 Take Action	○ 1	○ 2	
10 Take Action Now	○ 1	○ 2	

RANKED PREFERENCE – RANDOMISE CODES

Q10b And if the highest level of the **[bushfire, cyclone, flood, extreme heat, severe storm]** warning is named EMERGENCY WARNING and the lowest ADVICE, which are your top 3 preferences to describe the middle level?

Click here to view further information on the purpose of this system.

Please select three options.

		Level 2	
1 Warning		○ 2	
2 Take Action Now		○ 2	
3 Take Action		○ 2	
4 Act	**Advice**	○ 2	**Emergency Warning**
5 Prepare		○ 2	
6 Act Now		○ 2	
7 Watch and Act		○ 2	

Q11	In some situations an additional message will be issued once the danger of **[a bushfire/a cyclone/ a flood/extreme heat/a severe storm]** has lessened.	All clear	O 1
		Reduced threat	O 2
		Reduced risk	O 3
	Which of the following options best describes the final message to indicate that the danger has lessened?		
	RANDOMISE		

Q12   For the next question you will be sown a number of scenarios. For each please   select your top 3 phrases that would encourage you to take action.

SCENARIO 1
You are busy today with a number of errands planned. The weather is mild and winds are slowly increasing. You hear a message on the radio about a fire that has started in the region.
(LOW LEVEL) WARNING

SCENARIO 2
A cyclone is moving down the coast and will likely impact on land. It is forecast to get to Category 2. Emergency services are advising you to prepare yourselves and your property for potential impact.
(MIDDLE LEVEL) WARNING

SCENARIO 3
Major flooding is occurring in the river near your home and the river is rising. Heavier rainfall is expected this afternoon and into the evening. A warning has been issued that includes your area. Emergency services are advising everyone to leave with flooding likely to cut off more roads and damage homes tonight.
EMERGENCY WARNING

SCENARIO 4
You are visiting an area which is surrounded by bushland. It is a hot, windy day. A fire starts, and you receive a message saying the fire is heading in your direction. It is too dangerous to leave and roads have been cut off.
EMERGENCY WARNING

Which of the following phrases would best encourage you to take action in this scenario? Please rank your top three preferences.

RANDOMISE STATEMENTS

Scenario 1	Scenario 2	Scenario 3	Scenario 4
(LOW LEVEL) WARNING	(MIDDLE LEVEL) WARNING	EMERGENCY WARNING	EMERGENCY WARNING

Stay informed ○ 01	Get ready now ○ 01	Leave now ○ 01	Seek shelter now ○ 01
Stay alert ○ 02	Prepare for cyclone impact ○ 02	Prepare to leave ○ 02	Go to a safe place now ○ 02
Be aware ○ 03	Conditions are changing ○ 03	Leave immediately ○ 03	It is too late to leave ○ 03
A fire has started ○ 04	Make your cyclone preparations now ○ 04	Take action now ○ 04	Immediate danger ○ 04
Take care in the area ○ 05	Get ready to leave ○ 05	Get ready now ○ 05	Seek shelter immediately ○ 05
Keep up to date ○ 06	Prepare your home ○ 06	Prepare for flood impact ○ 06	Move indoors now ○ 06
Conditions may change ○ 07	Prepare to leave ○ 07	Increasing flood risk ○ 07	Take cover ○ 07
	Prepare for a Category 2 cyclone in your area ○ 08	Make your flood preparations now ○ 08	

<div style="background:teal"></div>

SECTION 4 – MAP APPLICATION

PROGRAMMING NOTE:
- **DISPLAY MAP BASED ON JURISDICTION AT TOP OF PAGE**
- **DISPLAY FINAL WARNINGS SYSTEM DESIGNED**

Q13	Each state and territory has an interactive map where the community can view current warnings and incidents. The warning system you constructed is shown on the map to demonstrate this. Do you think the system you designed is optimised for visual display on a map, or would an alternative be better?	The existing design is optimised ○ 1 An alternative approach would be needed ○ 2

ASK IF CODE 2 @ Q13 (an alternate approach is required)

Q14	Why is an alternate approach required?
OPEN ENDED	

DISPLAY WARNINGS SYSTEM IMAGES IN COLOUR SELECTED AT Q9
ASK IF CODE 2 @ Q13 (an alternate approach is required)

Q15	Which of the following options would be most effective when showing warnings on an interactive online map? *Click here to view further information on the purpose of this system.*	Triangle | Consistent hazard specific icon	○ 1
		Triangle | Hazard specific icons with increasing severity	○ 2
		Triangle | Action specific icon	○ 3
		Diamond | Consistent hazard specific icon	○ 4
		Diamond | Hazard specific icons with increasing severity	○ 5
		Diamond | Action specific icon	○ 6

Q15 – further information link

You may receive an official warning when there is a potential threat to property or life from a natural hazard. Natural hazards include bushfires, cyclones, floods, extreme heat and severe storms. The warning system is made up of a number of levels and the warning level increases to reflect the increasing risk to life.

These warnings act as a trigger for the you to take action and protect yourself against the danger.

You may see or hear a warning in a number of ways, including:

- Interactive online maps
- Official Websites
- Social Media (e.g. Facebook)
- TV
- Text messages
- Radio

Warnings issued include information on the current situation and outline the actions individuals should take.
